Iteration 60 | Use measured error sources to compare budget choices
A Actual complete-program error
TV
d4 / coarse
d4 / selected axis fine
d6 / coarse
real pair
complex rotated
mixed directions
B Complete-program guarantees
Certified TV upper bound
C Actual error improvement over the old baseline
Selected-axis refinement
Finite input d4 to d6
1.95x
1.07x
1.08x
1.06x
3.97x
4.01x
Baseline TV / new TV (larger is better)
D Different costs: no equal-budget speed claim
Selected-axis refinement
Finite input d4 to d6
Resource count / old baseline
3.00x
1.00x
1.00x
2.25x
3.00x
1.33x
Product nodes
Fock-box states
Measurement-tree nodes
Three previously studied two-mode inputs; axis selection frozen before new program evaluation
