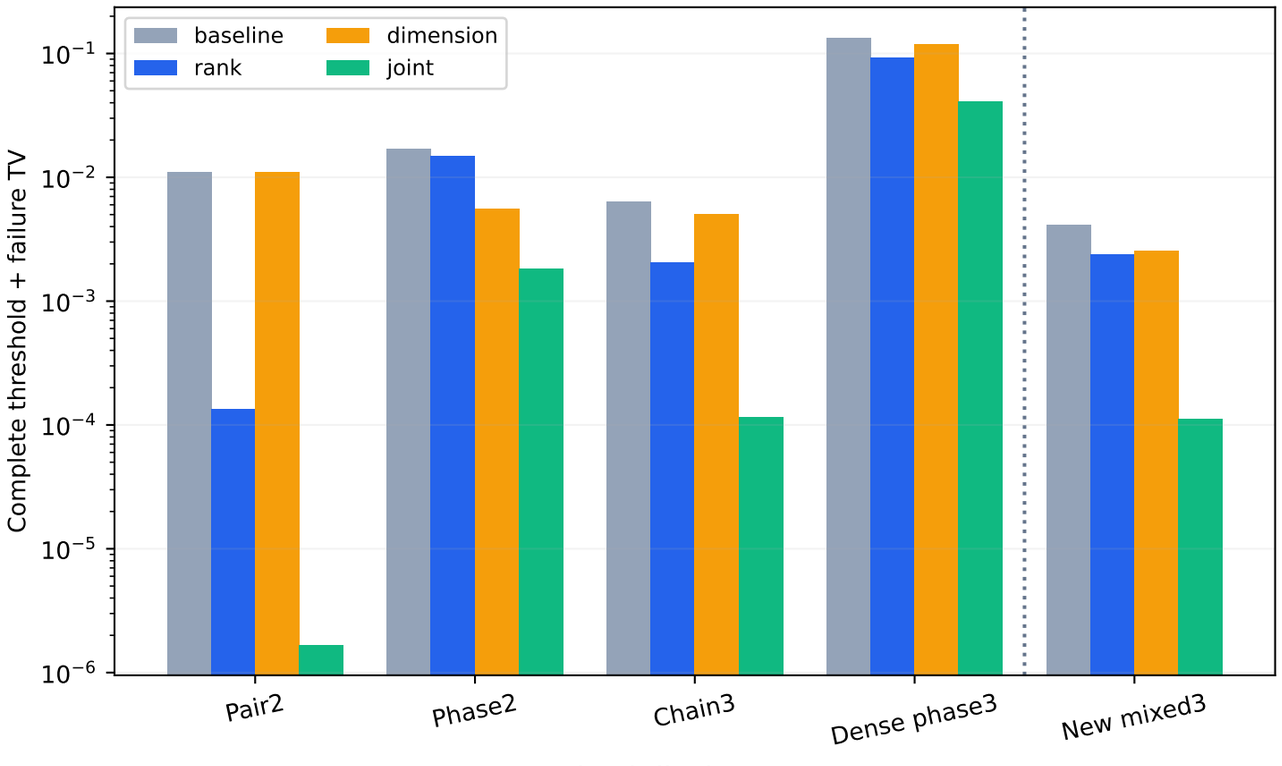
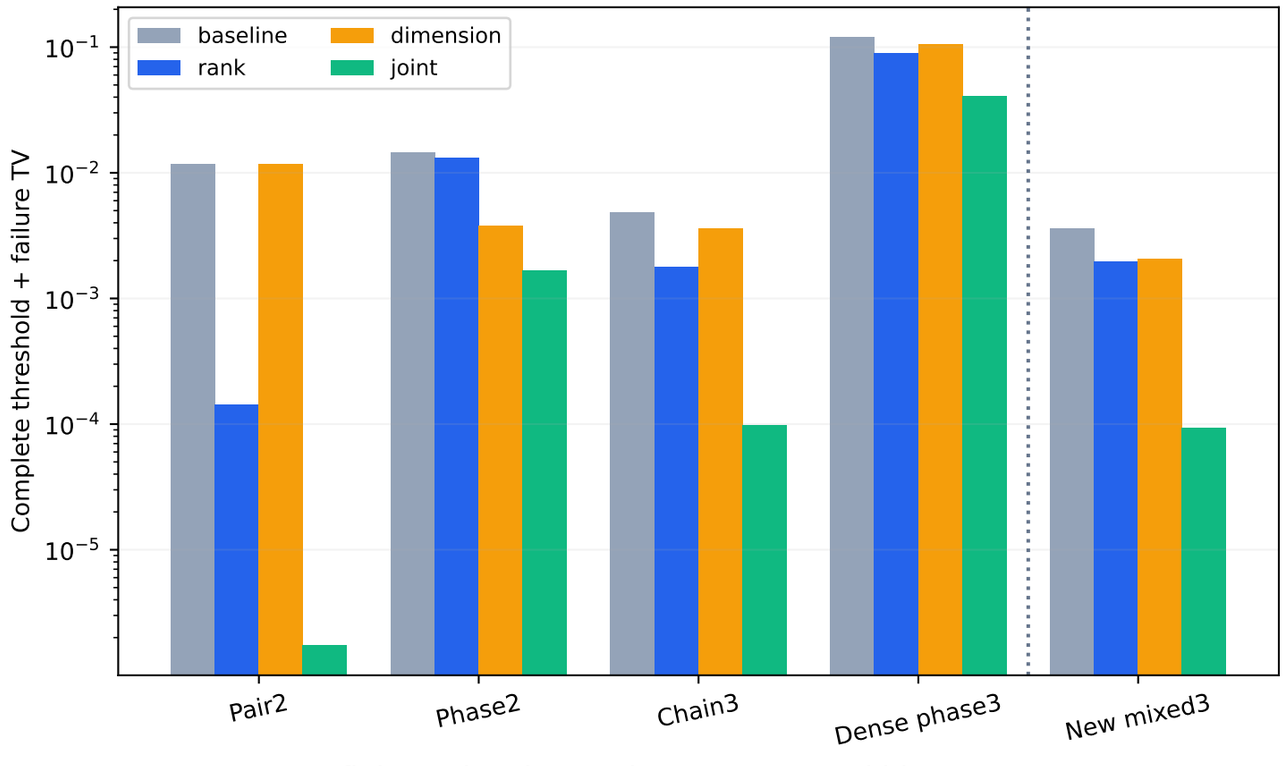
Iteration 66 | Actual Gaussian-SVD tensors to complete finite-word programs

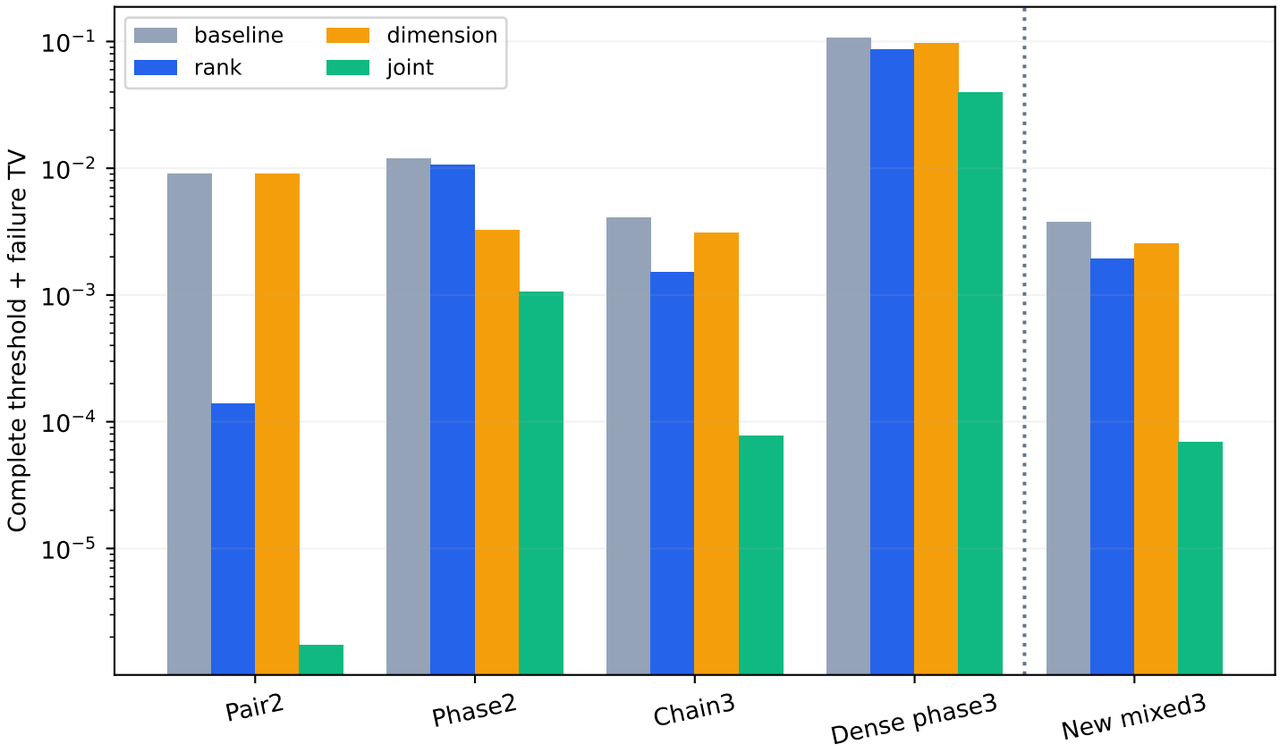
A Zero displacement



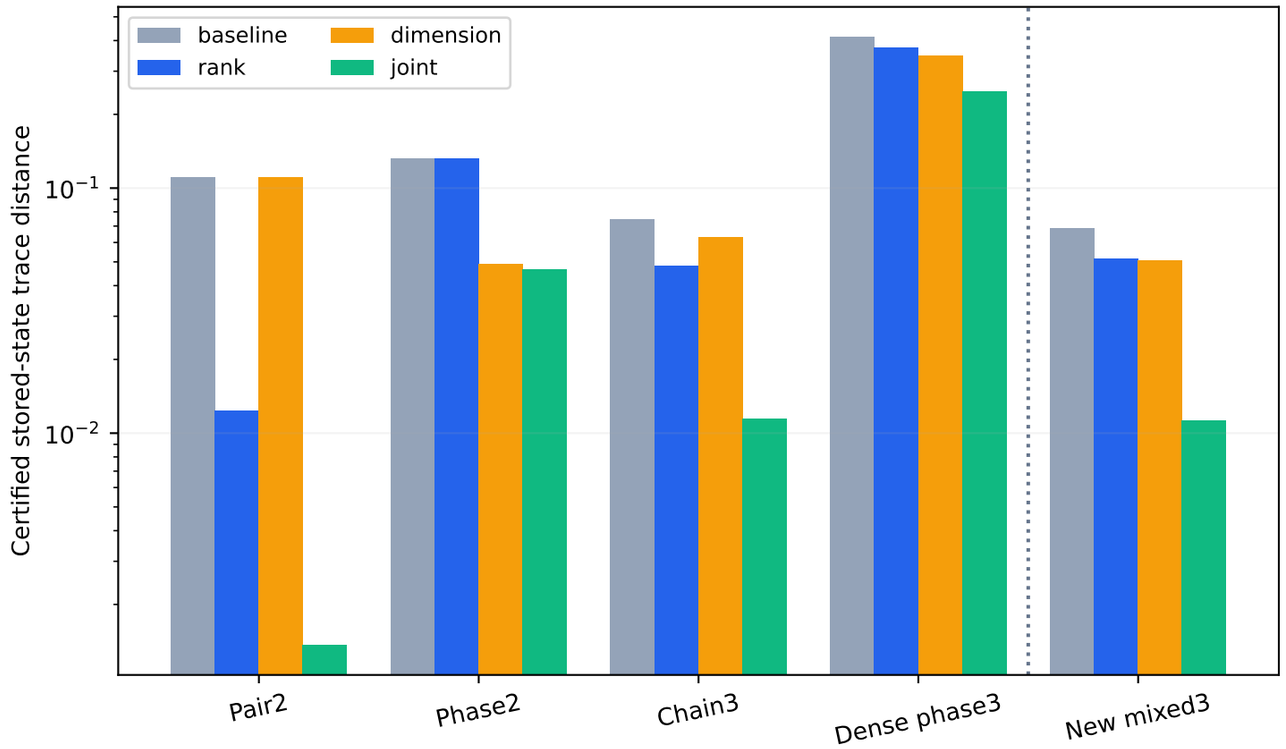
B Fixed displacement 1



C Fixed displacement 2



D Infinite rational Gaussian versus actual binary64 tensors



5 physical inputs,20 Gaussian-SVD constructions,60 complete programs. Four inputs follow exploratory pilots; the final input is new.
(d,rank):baseline(4,2),rank(4,6),dimension(6,2),joint(6,6). Rank is an occupation cap,not necessarily the actual MPS bond. Costs differ.
