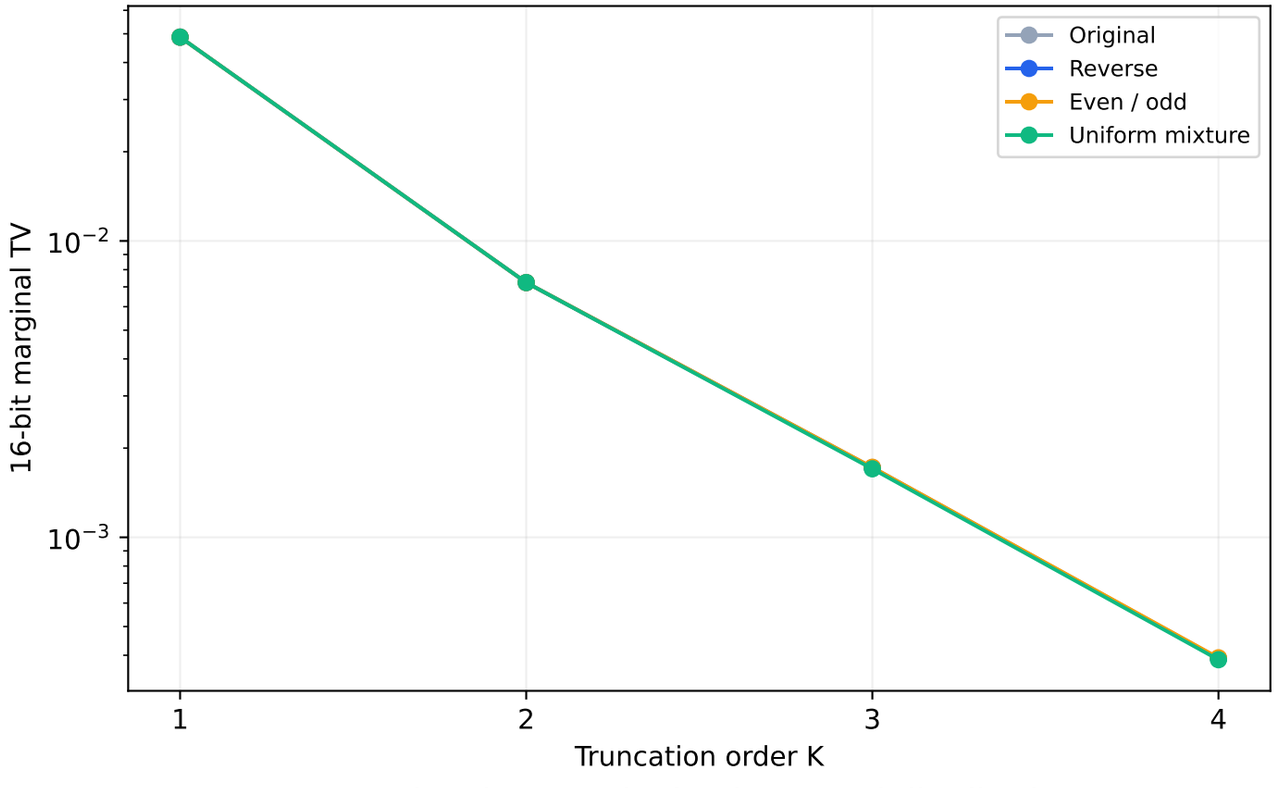
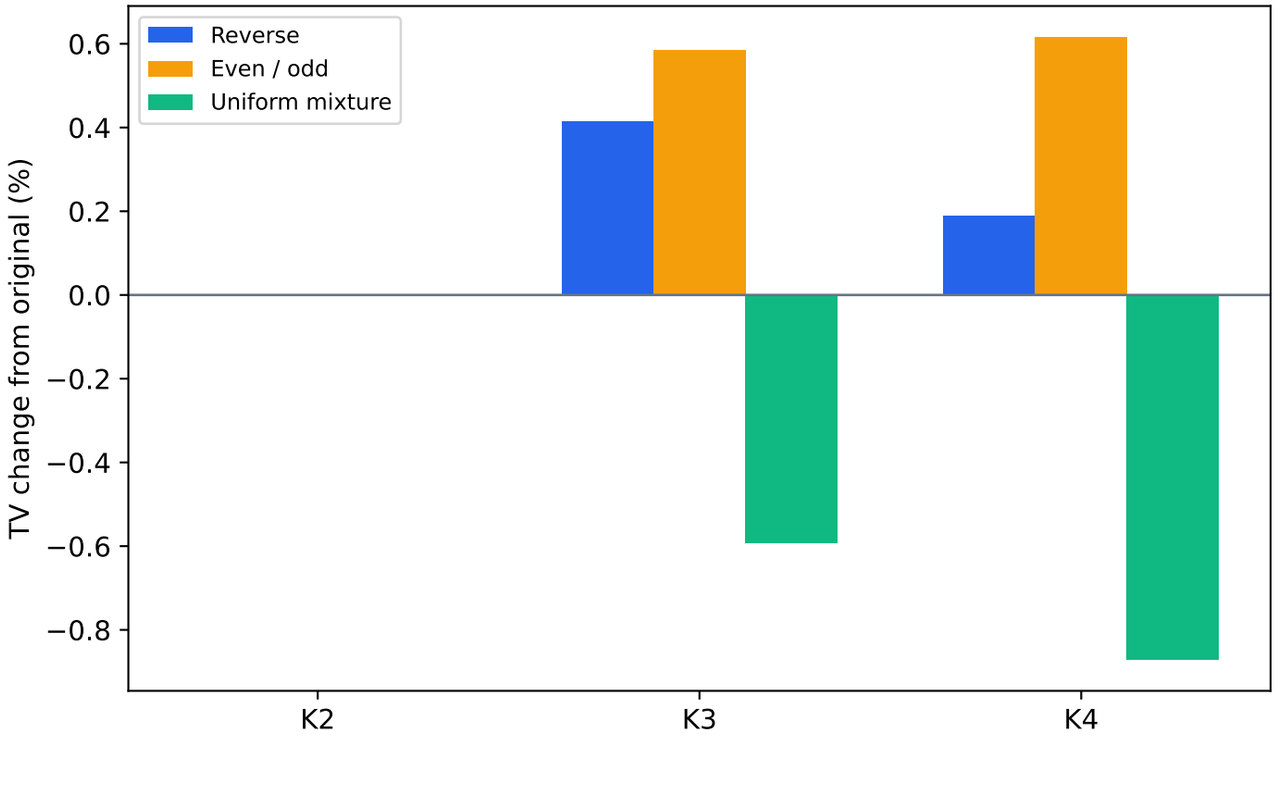
Iteration 61 | Fixed physical modes, different sampling orders

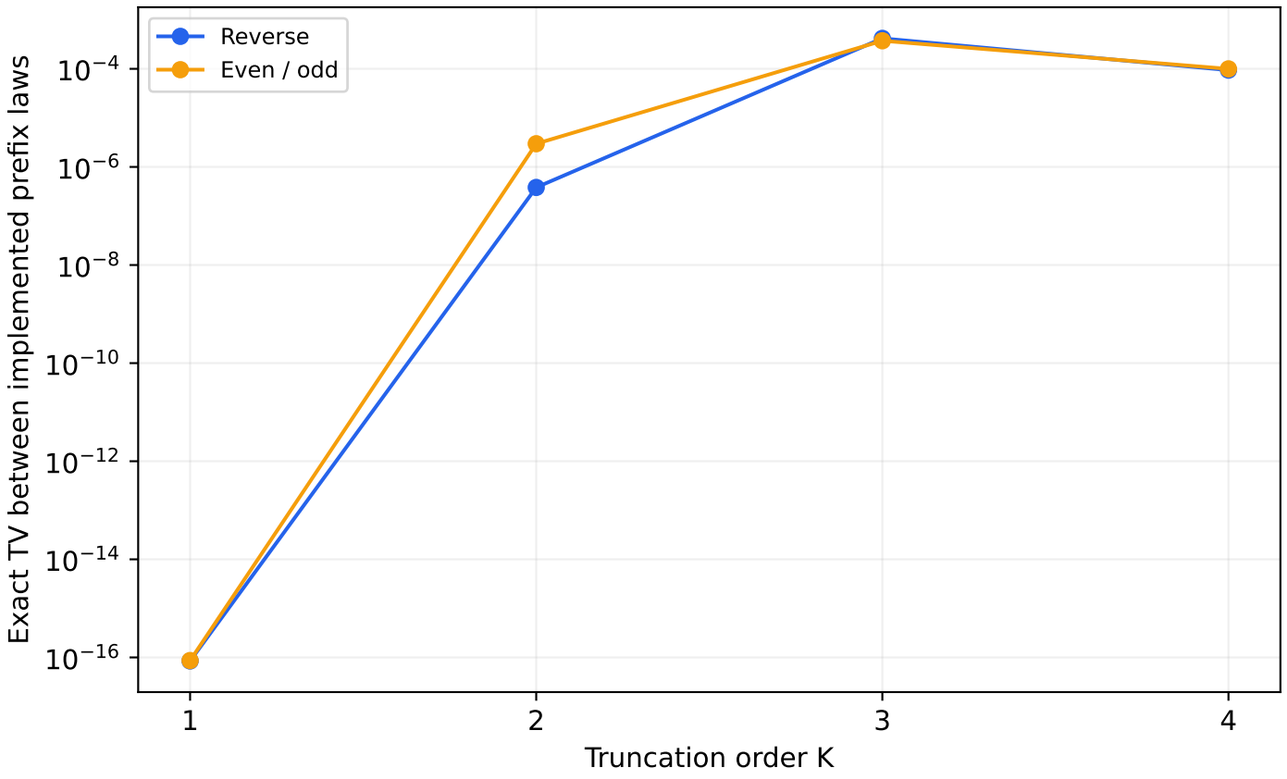
A Actual144 sampler, same 16-mode target



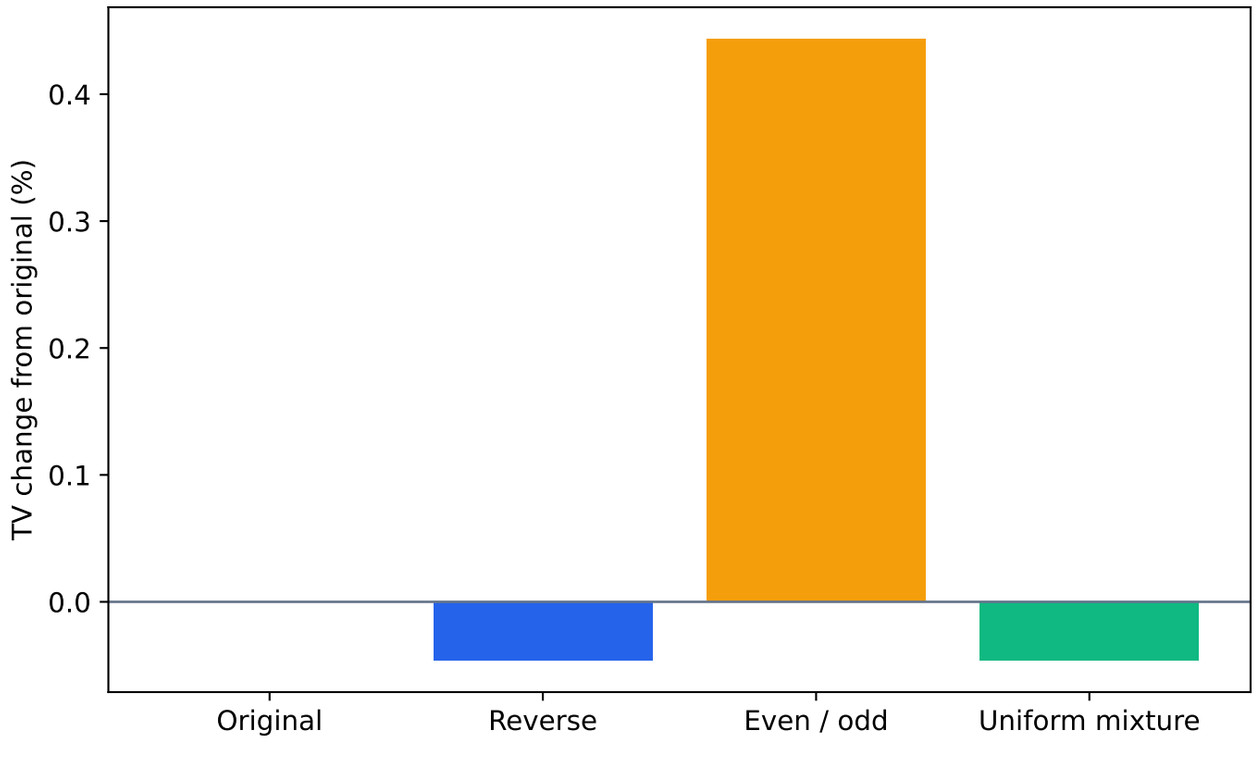
B Relative change: negative means smaller



C Order changes the implemented distribution



D Complete ten-mode control, K4



144-mode panels certify a marginal and a full-law lower bound, not a full-law error ranking.
Mixture uses ideal 1/3 order selection; one previously studied input, no new holdout.
